

@index — fetch

Appears in: [DL-04](#)

[dashboard/index.html:310-314](#), [580-591](#)

"@index uses plain fetch() calls against the API — no framework, no build step — and @betsy follows the same pattern."

@index — fetch

[dashboard/index.html:310-314](#)

```
310     async function api(path, method = 'GET') {
311         const r = await fetch(path, { method });
312         if (!r.ok) throw new Error(r.status);
313         return r.json();
314     }
```

...

[dashboard/index.html:580-591](#)

```
580     async function refresh() {
581         try {
582             const [inventory, suppliers, orders, invoices, duplicates, agentLog, scenarioInfo] =
583                 await Promise.all([
584                     api('/api/inventory'),
585                     api('/api/suppliers'),
586                     api('/api/purchase-orders'),
587                     api('/api/invoices'),
588                     api('/api/invoices/duplicates'),
589                     api('/api/agent-log'),
590                     api('/api/scenario'),
591                 ]);
```

What it shows: The dev dashboard's fetch helper — vanilla fetch, no framework — which Betsy's page mirrors.
