

@decide — triggers

Appears in: [DL-08](#)

pipeline/nodes/decide.py:38-66

"...all four approval triggers ... are marked as not auto-approved in the decide node ..." ... "I confirmed this in the decide node, where the duplicate flag, the price spike, and the escalation are each marked not auto-approved."

@decide — triggers

pipeline/nodes/decide.py:38-66

```
38         if ctype == "duplicate_invoice":
39             return {
40                 "action": "flag_duplicate",
41                 "requires_human": True,
42                 "auto_approved": False,
43                 "confidence": item["confidence"],
44                 "reasoning": item["reasoning"],
45                 "item": item,
46             }
47
48         if ctype == "price_spike":
49             return {
50                 "action": "flag_for_approval",
51                 "requires_human": True,
52                 "auto_approved": False,
53                 "confidence": 0.0,
54                 "reasoning": item["reasoning"],
55                 "item": item,
56             }
57
58         if item["action"] == "escalate":
59             return {
60                 "action": "escalate",
61                 "requires_human": True,
62                 "auto_approved": False,
63                 "confidence": 0.0,
64                 "reasoning": item["reasoning"],
65                 "item": item,
66             }
```

What it shows: The branches that mark every human-review case `auto_approved: False`, so all of them flow through `act` → the approval queue → a single notification point.
