"Both patterns use the same typed-state shape — each pattern keeps its own state file (@pipeline-state, @orchestra-state) ..."

@pipeline-state

pipeline/state.py:5-22

```
5  class PipelineState(TypedDict):
6      # Raw data (filled by ingest)
7      inventory: List[dict]
8      suppliers: List[dict]
9      all_pos: List[dict]
10     open_pos: List[dict]
11     invoices: List[dict]
12
13     # Stage outputs
14     detected: List[dict]      # DetectedCondition dicts
15     evaluated: List[dict]    # EvaluatedItem dicts
16     decisions: List[dict]    # Decision dicts
17     actions: List[dict]      # ActionResult dicts
18
19     # Final
20     report: str
21     errors: Annotated[List[str], operator.add]
```

What it shows: The PipelineState TypedDict — the typed object passed node-to-node through the pipeline.
