

@wireframe

Appears in: **DL-03**

dashboard/wireframe.html:422, 551-555

"The Showroom phase was building @wireframe — a fully interactive HTML prototype with working navigation, approve and decline buttons, expandable log entries, and a live badge counter."

```
@wireframe

dashboard/wireframe.html:422-422

422      <span class="badge" id="approval-badge">1</span>

...

dashboard/wireframe.html:551-555

551      <button class="btn btn-approve" onclick="approve('approval-copper', '✅ Order placed — 300m Copper Wire from BulkSupply Co. for €2,040.')">
552      ✅ Yes, go ahead
553      </button>
554      <button class="btn btn-decline" onclick="decline('approval-copper', '❌ Skipped — Copper Wire order declined. Betsy will check again on the next run.')">
555      ❌ No, skip this
```

What it shows: The static-data interactive prototype: four screens, working approve/decline handlers, and a live approval badge — used to validate layout before wiring real data.
