"The act node builds the complete PO payload the moment a decision is made — supplier, SKU, quantity, unit price, reasoning — and passes the whole thing to the approval queue."

@act

pipeline/nodes/act.py:28-75

```
28 def _queue_for_approval(decision: dict) -> None:
29     import uuid
30     from datetime import datetime
31     item = decision.get("item", {})
32     condition = item.get("condition", {})
33     best = item.get("best_supplier") or {}
34     sku_id = condition.get("sku_id", "")
35     payload = None
36     if decision["action"] == "generate_po":
37         payload = {
38             "supplier_id": best.get("supplier_id", "UNKNOWN"),
39             "sku_id": sku_id,
40             "quantity": decision.get("qty", 0),
41             "unit_price": decision.get("unit_price", 0),
42             "reason": decision.get("reasoning", "")[:200],
43             "requested_by": "betsy-pipeline",
44         }
45     api.queue_approval({
46         "decision_id": str(uuid.uuid4()),
47         "status": "pending",
48         "action": decision["action"],
49         "sku_id": sku_id,
50         "supplier_id": best.get("supplier_id", ""),
51         "po_total": decision.get("po_total", 0),
52         "qty": decision.get("qty", 0),
53         "unit_price": decision.get("unit_price", 0),
54         "confidence": decision.get("confidence", 0.5),
55         "reasoning": decision.get("reasoning", ""),
56         "created_at": datetime.now().isoformat(),
57         "payload": payload,
58     })
59
60
61 def _execute(decision: dict) -> dict:
62     action = decision["action"]
63     item = decision.get("item", {})
64     condition = item.get("condition", {})
65     best = item.get("best_supplier") or {}
66     sku_id = condition.get("sku_id", "N/A")
67
68     if not decision.get("auto_approved", False):
69         _queue_for_approval(decision)
70         return {
71             "action": action,
72             "status": "pending_human_review",
73             "executed": False,
74             "note": "Queued to /api/approvals",
75         }
```

What it shows: The act node assembles the complete PO payload at queue time (nothing recomputed on approval) and posts it to /api/approvals.
