

@decide — cap

Appears in: [DL-02](#), [DL-04](#)

pipeline/nodes/decide.py:12, 115-119

"That is a business rule, not an AI judgement, and it is written as a constant in code (@decide)." ... "the spending limit is a Python constant in the decide node, not a sentence in a system prompt (@decide)."

@decide — cap

pipeline/nodes/decide.py:12-12

```
12  MAX_AUTO_USD = float(os.getenv("MAX_AUTO_USD", "5000"))
```

...

pipeline/nodes/decide.py:115-119

```
115  action = result.get("action", "generate_po")
116  requires_human = bool(result.get("requires_human", po_total > MAX_AUTO_USD))
117  if po_total > MAX_AUTO_USD:
118      requires_human = True # financial safeguard cannot be overridden
```

What it shows: `MAX_AUTO_USD = float(os.getenv("MAX_AUTO_USD", "5000"))` is the hard limit; lines 117-118 force `requires_human = True` when `po_total > MAX_AUTO_USD`, with the comment "financial safeguard cannot be overridden" — proving the cap is code, not a prompt the model can talk past.
