

Risk Assessment & Mitigation

High-Risk Scenarios

1. Agent makes \$50,000 mistake

- Mitigation: Maximum autonomous spend limit (\$5k-10k), human approval for high-value transactions

2. Agent selects wrong supplier causing production shutdown

- Mitigation: Delivery time evaluation, reliability scoring, buffer time in stockout detection

3. Agent exhibits supplier bias

- Mitigation: Regular bias audits, diverse supplier scoring factors, fairness checks

4. Agent misses duplicate invoice

- Mitigation: Multiple duplicate detection strategies, invoice pattern matching

5. Edge case causes infinite loop or crash

- Mitigation: Timeout mechanisms, error handling, escalation workflows
-

Medium-Risk Scenarios

1. Agent makes sub-optimal decisions (penny-wise, pound-foolish)

- Mitigation: Learning from outcomes, EV-style calculations including shutdown costs

2. Supplier out of stock not detected

- Mitigation: Availability checking before PO generation, failover logic

3. Budget drift over time

- Mitigation: Running budget tracking, alerts at 80% threshold
