

Betsy -- Wireframes

Two design directions were explored. The first is a standalone dashboard for Jenny, drawn as four screens. The second -- the chosen direction -- follows enterprise AI tool patterns, where the AI sits as a layer on top of the familiar data, on a single page.

The wireframes are authored as plain text with wiremd and rendered to PNGs in diagrams/. To regenerate them after an edit:

```
python build_wireframes.py
```

That renders each diagrams/wireframes/*.wmd.md source to HTML in the grayscale "wireframe" style, screenshots it with headless Edge, and trims the image to its content. Requires the global wiremd CLI (npm install -g wiremd), Pillow, and Microsoft Edge.

Version 1 -- Standalone Dashboard (4 screens)

Pattern: a dedicated app Jenny opens on its own.

Four screens she moves between -- Home, Pending approval, Agent log, and the Supplier scoreboard. It reads cleanly, but it is a separate app she has to learn and keep open alongside everything else she already uses. That is why it was not the chosen direction.

Rendered wireframe: diagrams/wireframe-betsy-standalone.png

```
# Version 1 -- Standalone Dashboard

## Screen 1 -- Home {.grid-3}

### 1
Needs your approval
[Review]*

### 3
Handled automatically

### 0
Critical alerts

## Recent activity

- Ordered 500 × Steel Bolts M8 -- FastParts Co.
- Ordered 200 × Hydraulic Seals -- QuickShip
- Price spike on Copper Wire -- waiting for you

## Screen 2 -- Pending approval

**Copper Wire -- price looks unusual**

The usual price is ?4.20/m. Today every supplier quotes ?6.80-7.10/m -- about 60%
higher than normal. I'd normally order 300 m from BulkSupply Co. for ?2,040. I'm
asking you because a jump like this usually means a market issue or a data error.

Confidence: low
```

```
[Yes, go ahead]* [No, skip this]

## Screen 3 -- Agent log

**Today**

- 10:14 -- Ordered Steel Bolts M8 · 500 units · FastParts Co. · ?90
- 08:30 -- Flagged Copper Wire for review · price 60% above normal

**Yesterday**

- 16:02 -- Ordered Hydraulic Seals · QuickShip
- 14:55 -- Flagged duplicate invoice · INV-2024-0291

## Screen 4 -- Supplier scoreboard

| Supplier | Track record | Speed | Last order |
|---|---|---|---|
| QuickShip Express | ????? | 1 day | Yesterday |
| FastParts Co. | ????? | 2 days | 3h ago |
| BulkSupply Co. | ????? | 5 days | 2 weeks ago |
| PrecisionParts | ????? | 3 days | Invoice flag |
| ValueFirst | ????? | 7 days | 1 month ago |
```

Version 2 -- Enterprise AI Layer (chosen direction)

Pattern: AI as a layer on top of familiar data surfaces. References: Salesforce Einstein, Microsoft Copilot, Tableau Pulse, Glean.

The whole surface on one page: a command bar to ask Betsy something, a plain-English summary of what Betsy just did, the procurement tables Jenny already recognises with Betsy's read added as columns, and the approval ("Needs your OK") card inline rather than in a separate app. The patterns used:

- AI command bar -- a prompt at the top for natural-language input.
- AI narrative -- an auto-generated, plain-English summary of the state.
- AI-scored tables -- familiar tables with the AI's read added as columns.
- Inline approvals -- the human decision lives in the same surface.

Rendered wireframe: `diagrams/wireframe-betsy-layer.png`

Source (`diagrams/wireframes/betsy-layer.wmd.md`):

```
# Version 2 -- Enterprise AI Layer (chosen)

Ask Betsy something
[_____]{type:search}

> Steel Bolts and Hydraulic Seals were low -- I reordered both.
> Copper Wire is 60% over its normal price, so I flagged it for you.

[Restock critical]* [Check invoices] [View log]

## Inventory

| Item | Stock | Days left | Risk | Action |
```

---	---	---	---	---
Steel Bolts M8	240	2	Critical	Ordered
Hydraulic Seals	15	1	Critical	Ordered
Copper Wire	890	7	Watch	Flagged
Aluminium Sheet	3200	26	Good	--

Suppliers

Supplier	Betsy score	Speed	Last used	Status
---	---	---	---	---
QuickShip Express	?????	1 day	Today	Good
FastParts Co.	?????	2 days	Today	Good
PrecisionParts	?????	3 days	2w ago	Invoice flag
BulkSupply Co.	?????	5 days	2w ago	Good
ValueFirst	?????	7 days	1m ago	OK

Needs your OK

Copper Wire · BulkSupply Co. · 300 m · ?2,040
60% above the 30-day average.

Design Principles Applied

Principle	How Betsy applies it
-----	-----
AI is a layer, not a separate app	Betsy sits on top of inventory/supplier data, it does not replace
-----	-----
Outputs short and actionable	The narrative is two or three sentences; every section has a button
-----	-----
Clear "generated by AI" signal	AI-produced columns and cards are marked as Betsy's
-----	-----
Familiar work surfaces	The tables look like any procurement table -- Betsy adds a column
-----	-----
Confidence visible	Every AI recommendation shows a confidence indicator
-----	-----
